OVERVIEW of BADA

EUROCONTROL's Base of Aircraft Data

Angela NUIC
8 June 2024

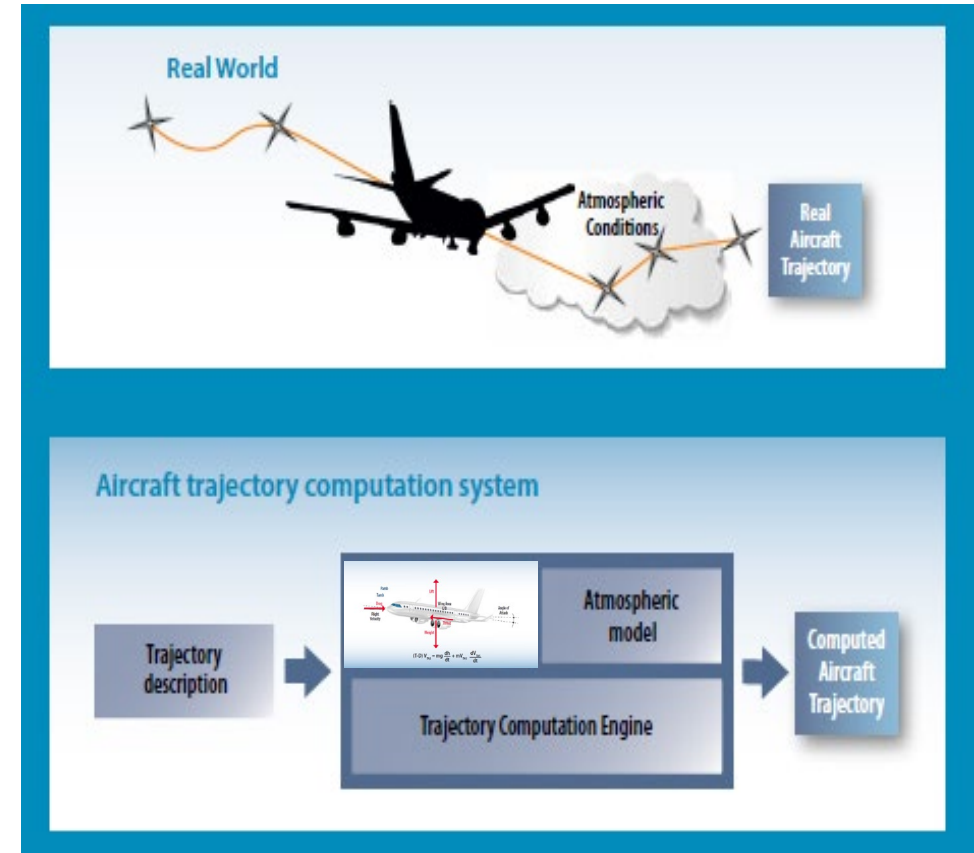

What is BADA?

- Aircraft Performance Model (APM)
- Designed for simulation and prediction of aircraft trajectories for purposes of ATM research and operations

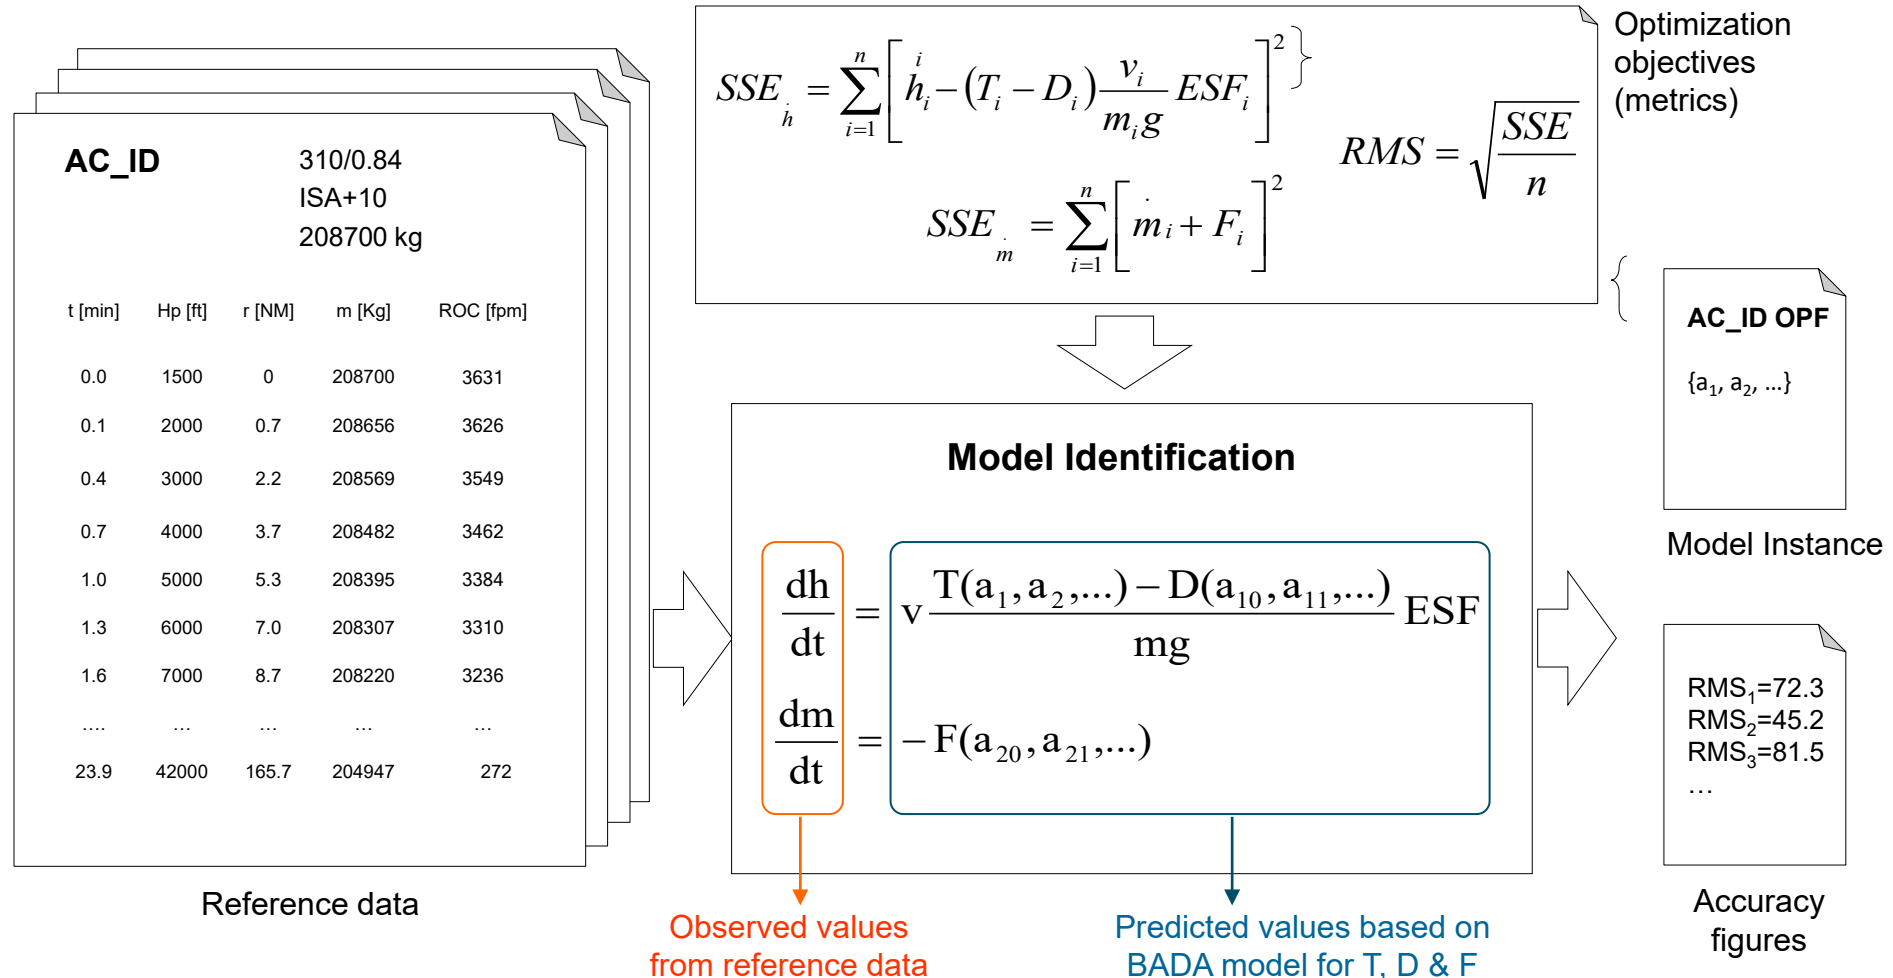

- Used by EUROCONTROL and provided to ATM community worldwide

Input data for modelling process

- BADA models developed from various public and aircraft manufacturer's proprietary data:
 - Jane's All the World's aircraft
 - Aircraft flight and operating manuals
 - Performance software
- Flight recordings or radar tracks
 - Used as complementary data

Modelling process: Identification of coefficients

BADA 3 release files

Native models

- BADA 4: Accuracy Tables Files (ATF) are part of the release files

BADA APM families

BADA 3

- Today's standard fixed-wing APM
- Models aircraft behavior over nominal part of flight envelope
- Meets today's requirements for aircraft performance modelling and simulation

100% of ECAC IFR operations
264 (95%) models +
1627 (5%) synonyms

BADA 4

- New fixed-wing APM developed to meet requirements of future ATM systems
- Provides increased levels of precision in aircraft performances parameters over the entire flight envelope
- Enables modelling and simulation of advanced systems and future concepts

83% of ECAC IFR operations
106 models

BADA H

Helicopter APM

96% of ECAC IFR operations
26 models

BADA Product components

BADA APM

- Releases files and doc's
- Modelling reference data and documents

Support Tools

- Web User Interface (licencing platform, data repository, set of performance calculation tools, support request tool)
- pyBADA

Support Services

- Maintenance and support
- Technical support
- Training

BADA is not a software product!

BADA Users

- BADA is free of charge
- Use is governed by a licence agreement
 - Web licencing per model family and intended use

Permitted use of BADA

- Almost 30 years of efforts in building partnership with aircraft manufacturers, resulted in:
 - Active partnership and data agreements in place with Airbus, ATR, Boeing, Embraer
 - Data agreement with Dassault, BAE Systems, Eclipse, Diamond
 - The process is very long and cumbersome, requires determination of individuals, persuasion to gain confidence of aircraft manufacturers

Permitted use of BADA

- ATM R&D modelling and simulation
- Non-safety-critical ATC operational applications
- Environmental assessments
- Education and training
- New use cases continuously discussed with manufacturers in order to expand the scope of BADA permitted use
 - Pilot decision support tools
 - Airline post flight analysis and modelling
 - Travel Impact Models
 - Env Noise

Forbidden use of BADA

- All safety-critical ATM applications and systems
- Any comparisons of any kind between aircraft types (from the same or different aircraft manufacturers) where the intent of such a comparison is to identify a direct relationship between aircraft performances. However, general (system-wide) comparisons of aircraft performance of different aircraft types for research purposes to assess ATM system performances may be allowed
- Aircraft flight planning and flight dispatch purposes
- Private persons

Application Domain	Intended Use	BADA 3 No. Licences*	BADA 4 No. Licences*	Example Users
ATM R&D	Simulation and modelling tools for wide range of R&D	427 [50%]	90 [63%]	Major R&D and education institutions ENAC, NLR, DLR, DFS, ONERA, MITRE, MIT, NASA, FAA, ENRI, JAXA
